SEMANTIC IMAGE SEGMENTATION IN THE DARK WITH DOMAIN ADAPTATION METHOD

THESIS PRESENTATION

Nguyen Thanh Danh – 17520324

Phan Nguyen – 17520828

Advisor: Dr. Nguyen Vinh Tiep

Contents

1. Introduction
2. Related Work
3. Proposed Framework
 - a. Image Translation Component
 - b. Semantic Segmentation Component
4. Experimental Results
5. Conclusion

Practical Context

1. Autonomous Vehicles - ADAS
2. Medical Recommendation System
3. Satellite Image Understanding

Problem Definition

Semantic image segmentation on *nighttime* cityscapes images

- **Input:** nighttime cityscapes images
- **Output:** segmentation maps

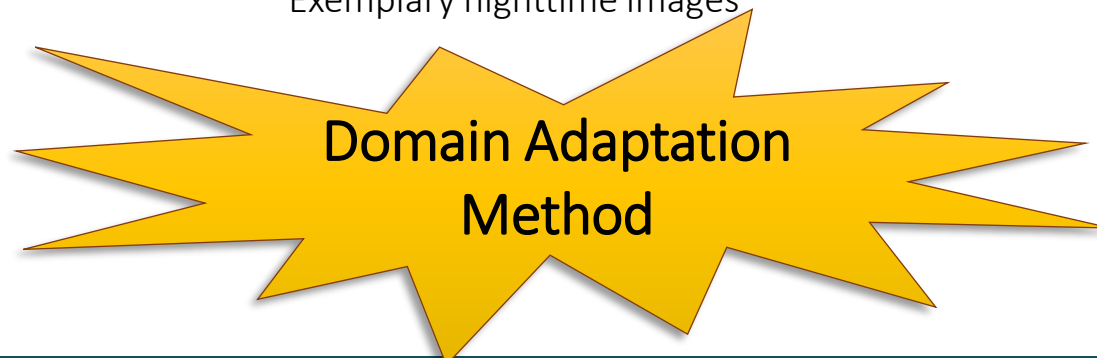

Challenges

- **Lack of annotated dataset** for nighttime cityscapes segmentation
- External conditions: light blur, rainy, etc.

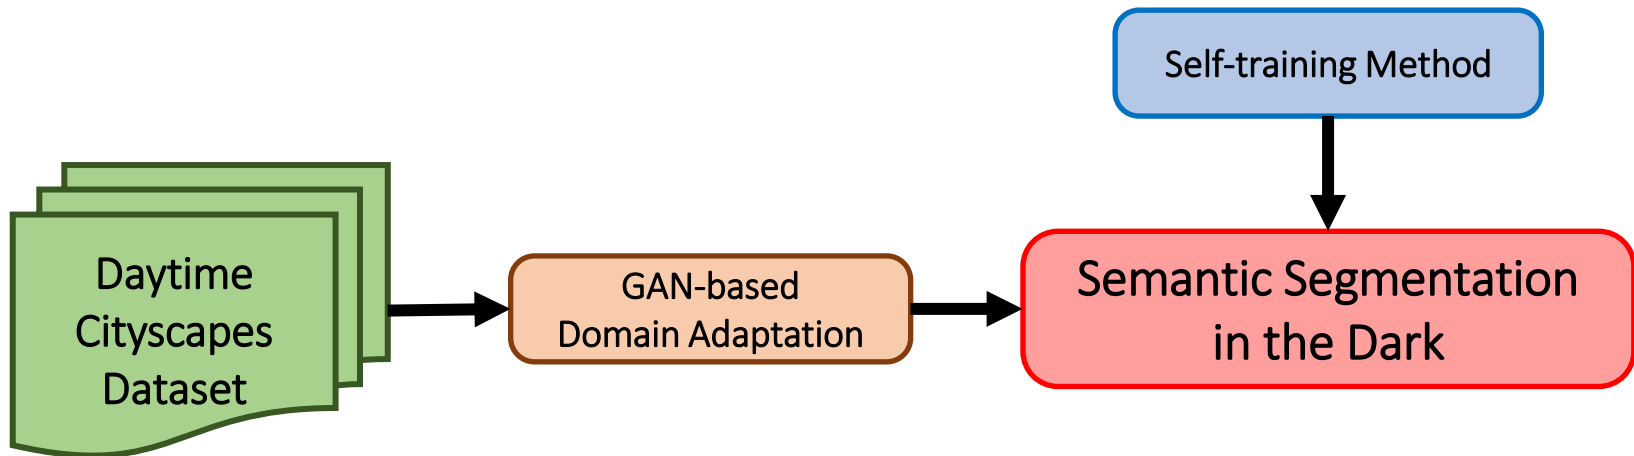

Exemplary nighttime images

Objectives

Solve **semantic image segmentation in the dark** with **GAN-based domain adaptation method** to leverage existing daytime cityscapes dataset along with **self-training method**

Our Contributions

1. Propose a framework for **semantic image segmentation in the dark** with **domain adaptation method**
2. Propose **a loss function** for semantic image segmentation
3. Build a **nighttime cityscapes dataset** with GAN

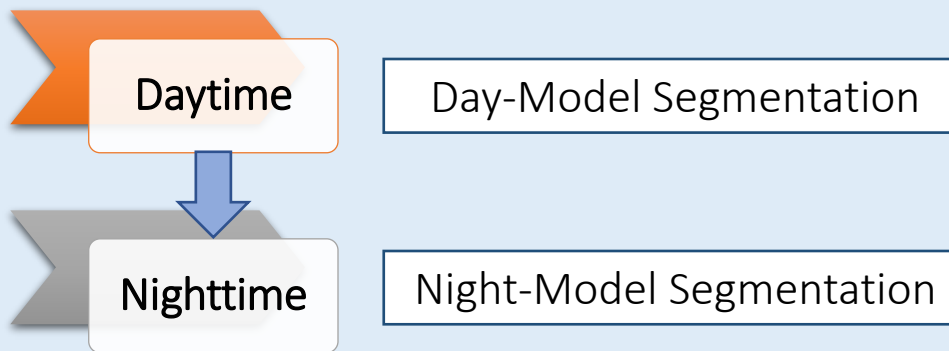

Related Work

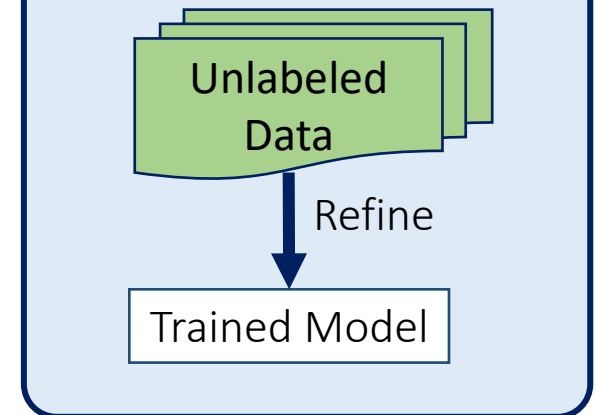

1. Dark Model Adaptation. ITSC2018

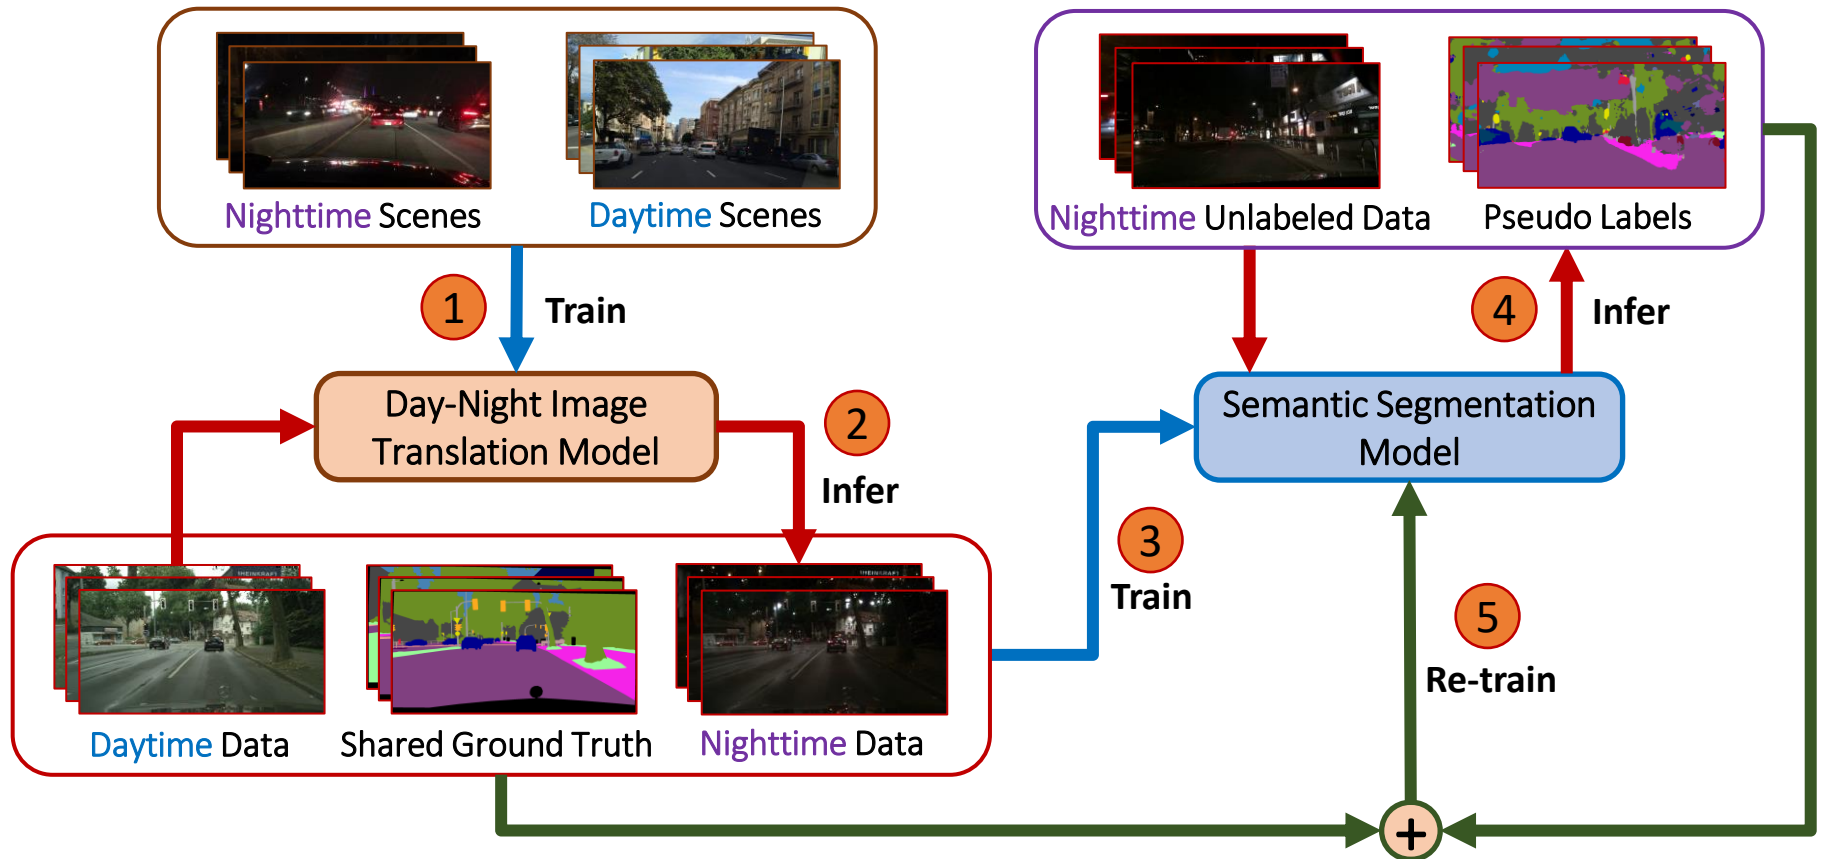

2. See clearer at night. ISOP2019

3. Self-training. NIPS2020

Proposed Framework

Dataset

- **NEXET Dataset**: ~50k day, night, twilight images
- **Histogram-based method** to separate images into 2 domains: daytime and nighttime (ignore twilight)

19,858 Daytime Images

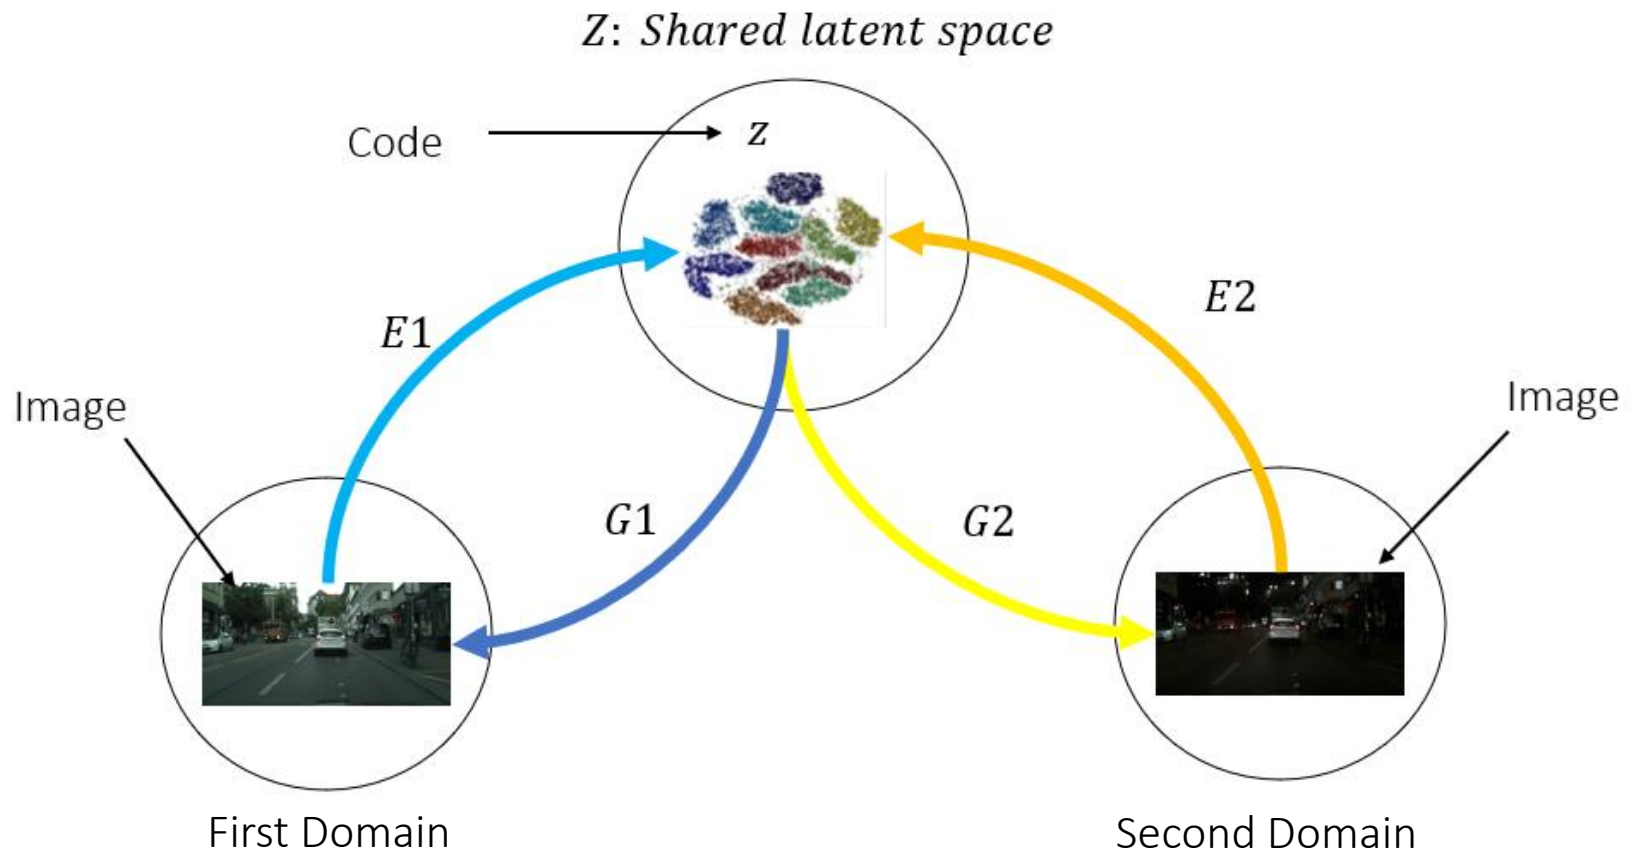

19,523 Nighttime Images

GAN-based Method

Assumption: **shared latent space**

GAN-based Method

1. Variational Autoencoders (VAEs)
2. Weight-sharing
3. GAN

Day2Night Translation Results

- Mismatch vehicle/traffic lights
- Correctly match the lights (w/ Perceptual Loss)

Original Images

Initial Results

w/ Perceptual Results

Quantitative Results

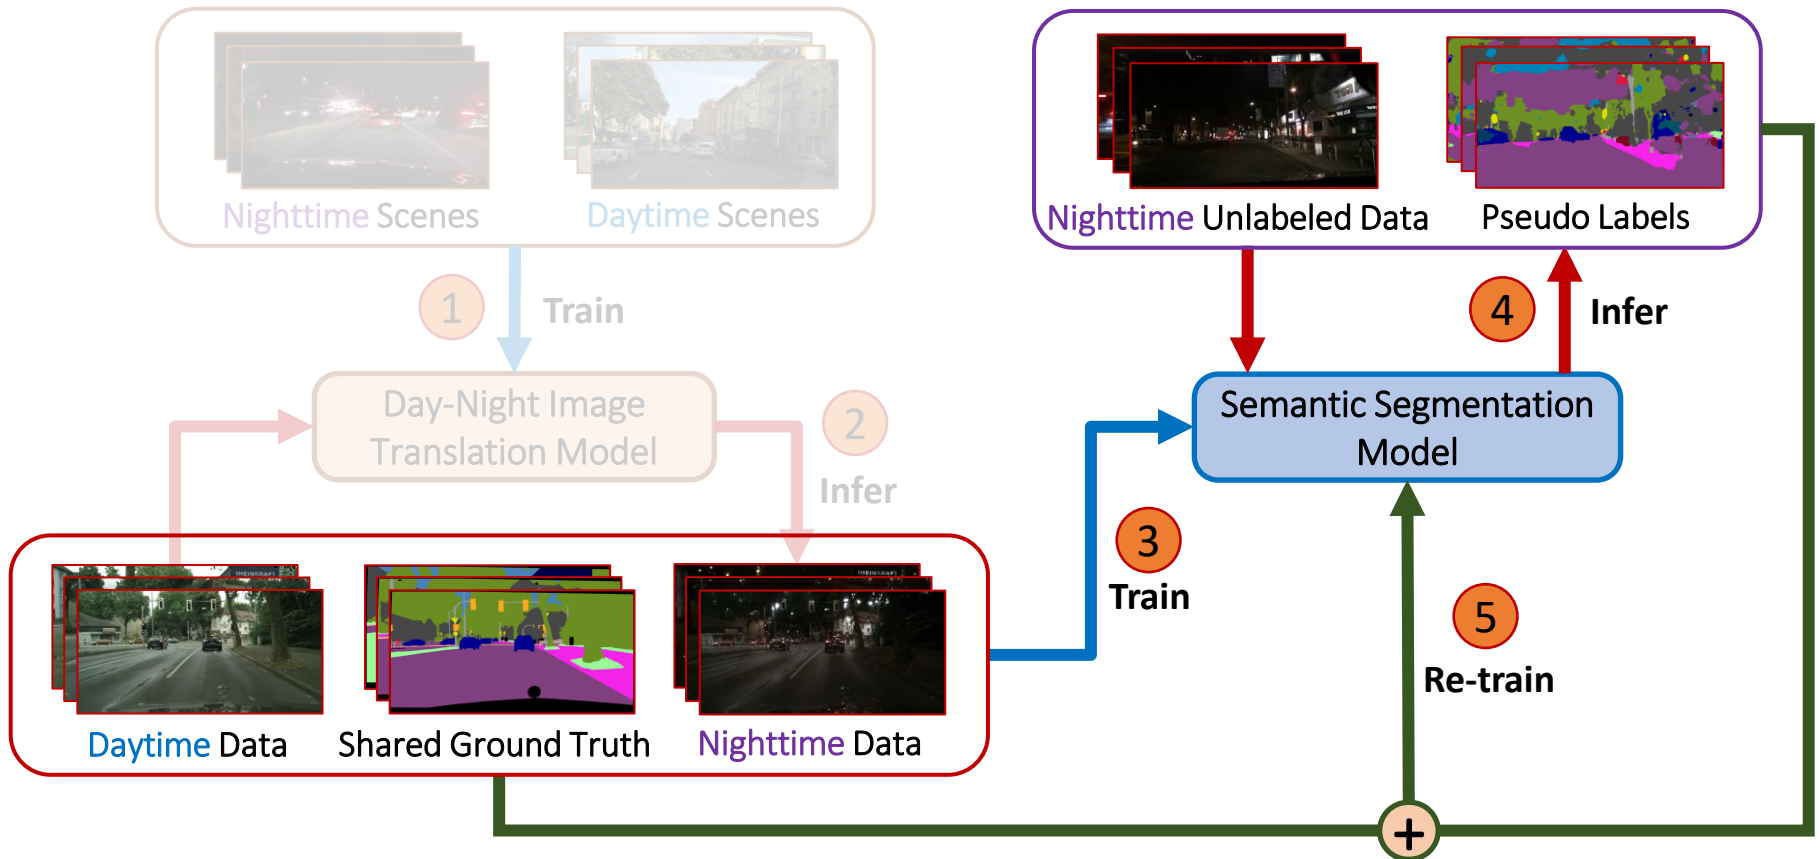

$$FID = \|\mu_1 - \mu_2\|^2 + Tr(C_1 + C_2 - 2\sqrt{C_1 C_2})$$

- μ : mean
- C : Covariance

FID score shows the differences of **generated** and **real** images.

ID	Method	FID_night
1	UNIT w/o Perceptual	98.39
2	UNIT w Perceptual	97.68

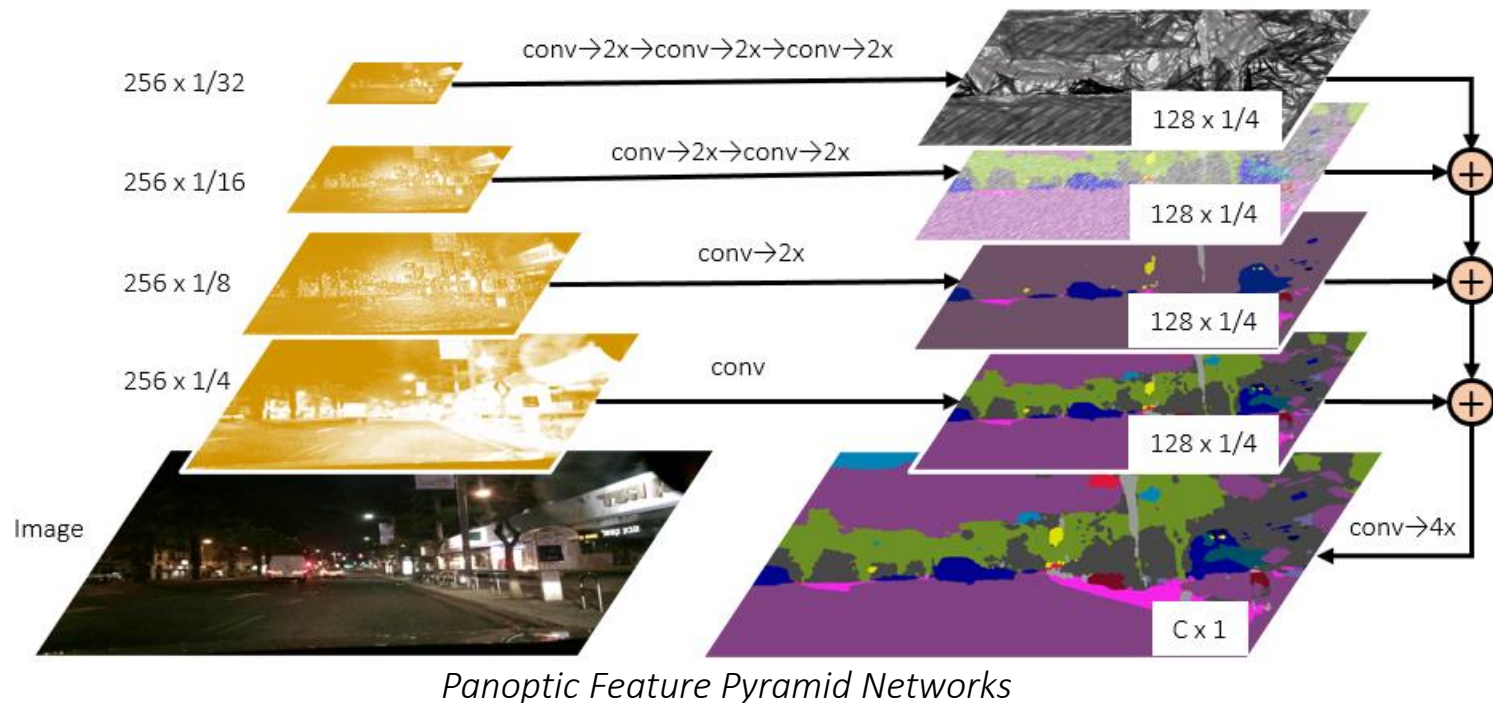

Semantic Segmentation Component

Semantic Segmentation Model

- Panoptic Feature Pyramid Networks – ResNet101
- Specifications:
 - Ensemble **low and high level features**
 - Extract **multi-scale features**

Proposed Combined Loss

- Measure **differences** among **couple of pixels**

$$L_{pixel}(p_t) = \mathbf{Cross_Entropy_Loss}(p_t) = -\log(p_t)$$

- Solve **imbalanced problem** of major classes

$$L_{balance}(p_t) = \mathbf{Focal_Loss}(p_t) = -\alpha_t (1 - p_t)^\gamma \cdot \log(p_t)$$

$$p_t = \begin{cases} p(x_i) & \text{if } y = 1 \\ 1 - p(x_i) & \text{if } y = 0 \end{cases}$$

- We propose:

$$L_{combined}(p_t) = \alpha L_{pixel}(p_t) + (1 - \alpha)L_{balance}(p_t)$$

(Weight $\alpha = 0.5$)

Segmentation Dataset

Cityscapes. M. Cordts et al. CVPR2016

Nighttime Driving Test. D.Dai and L. Gool. ITSC2018

Void	Road	Sidewalk	Building	Wall	Fence	Pole	Traffic Light	Traffic Sign	Vegetation
Terrain	Sky	Person	Rider	Car	Truck	Bus	Train	Motorcycle	Bicycle

Evaluation Metrics

- Pixel Accuracy (PA)
- Class Accuracy (CA)
- **Mean Intersection over Union (mIoU)**
- Frequency Weighted Intersection over Union (FWIoU)

$$IoU = \frac{\textit{Intersection}}{\textit{Union}} = \frac{\text{Diagram 1}}{\text{Diagram 2}}$$

The diagram illustrates the Intersection over Union (IoU) metric. The numerator, labeled 'Intersection', shows two overlapping white rounded rectangles with a blue shaded area representing their common region. The denominator, labeled 'Union', shows two overlapping blue rounded rectangles, representing the total area covered by both shapes.

Experiment 1

- **Daytime** Cityscapes images
- Self-train with **daytime** CamVid dataset

Data Distribution

➔ Self-training from a checkpoint is better than from scratch

ID	Configuration	mIoU
1.1	FPN-res101-daytime-Cityscapes	27.5
1.2	FPN-res101-self-training-from-scratch	27.1 (-0.4)
1.3	FPN-res101-self-training-from-ckpt	29.0 (+1.5)

Experiment 2

- **Day-night** Cityscapes images
- Self-train with **14.937 nighttime images**

Data Distribution

■ Daynight Trainset, 5950
■ Daynight Valset, 1000
■ Nighttime Unlabeled, 14937

- ➔ Minimizing image domain distance improves model performance
- ➔ Self-training is not useful?

ID	Testset	Configuration	mIoU
2.1	Origin	FPN-res101-daynight	31.5 (+2.5)
2.2		FPN-res101-self-training-15k-from-ckpt-2.1	28.8 (-2.7)
2.3	Converted	FPN-res101-daynight	25.2
2.4		FPN-res101-self-training-15k-from-ckpt-2.1	24.7 (-0.5)

Experiment 3

- Day-night Cityscapes images
- Self-train with **14.937** nighttime images
- Image Translation with **perceptual loss**

→ Perceptual loss maintains semantic features when translating images

→ Self-training is not useful?

Data Distribution

■ Daynight Trainset, 5950
■ Daynight Valset, 1000
■ Nighttime Unlabeled, 14937

ID	Testset	Configuration	mIoU
3.1	Origin	FPN-res101-daynight	33.9 (+2.4)
3.2		FPN-res101-self-training-15k-from-ckpt-3.1	32.1 (-1.8)
3.3	Converted	FPN-res101-daynight	29.3
3.4		FPN-res101-self-training-15k-from-ckpt-3.1	28.4 (-0.9)

Experiment 4

- Day-night Cityscapes images
- Self-train with **1.600** nighttime images (based on **histogram**)
- Image Translation with **perceptual loss**

➔ Self-training is useful with suitable amount of unlabeled data

Data Distribution

■ Daynight Trainset, 5950
■ Daynight Valset, 1000 ■ Nighttime Unlabeled, 1600

ID	Testset	Configuration	mIoU
3.1	Origin	FPN-res101-daynight	33.9
4.1		FPN-res101-self-training-1k6-HIS-ckpt-3.1	34.2 (+0.3)
3.3	Converted	FPN-res101-daynight	29.3
4.2		FPN-res101-self-training-1k6-HIS-ckpt-3.1	29.8 (+0.5)

Experiment 5

- **Only-night** Cityscapes images
- Self-train with **1.600** nighttime images (based on **histogram**)
- Image Translation with **perceptual loss**

➔ An extra training on the target prediction domain improves model performance

Data Distribution

ID	Configuration	mIoU
5.1	FPN-res101-onlynight	29.6
5.2	FPN-res101- morenight -from-ckpt-3.1	34.7 (+0.8)
5.3	FPN-res101-self-training-1k6-HIS-from-ckpt-5.1	29.8 (+0.2)
5.4	FPN-res101-self-training-1k6-HIS-from-ckpt-5.2	33.3 (-1.4)

Experiment 6

- Day-night Cityscapes images
 - Self-train with **1.600** nighttime images (based on **histogram**)
 - Image Translation with **perceptual loss**
 - Segmentation with **Focal Loss**
- ➔ Focal loss result is not higher than cross entropy loss

Data Distribution

ID	Configuration	mIoU
3.1	FPN-res101-daynight- CE	33.9
4.1	FPN-res101-self-training-1k6-HIS-from-ckpt-3.1- CE	34.2 (+0.3)
6.1	FPN-res101-daynight- FL	26.9
6.2	FPN-res101-self-training-1k6-HIS-from-ckpt-6.1- FL	28.3 (+1.4)

Experiment 7

- Day-night Cityscapes images
 - Self-train with **1.600** nighttime images (based on **FID**)
 - Image Translation with **perceptual loss**
 - Segmentation with **Proposed Combined Loss (CL)**
- ➔ FID method helps choose similar domain images

Data Distribution

ID	Configuration	mIoU
3.1	FPN-res101-daynight-CE	33.9
7.1	FPN-res101-self-training-1k6-FID-from-ckpt-3.1-CE	38.8 (+4.9)
7.2	FPN-res101-self-training-1k6-FID-from-ckpt-3.1-CL	39.3 (+5.4)
7.3	FPN-res101-self-training-1k6-HIS-from-ckpt-3.1-CL	33.1 (-0.8)

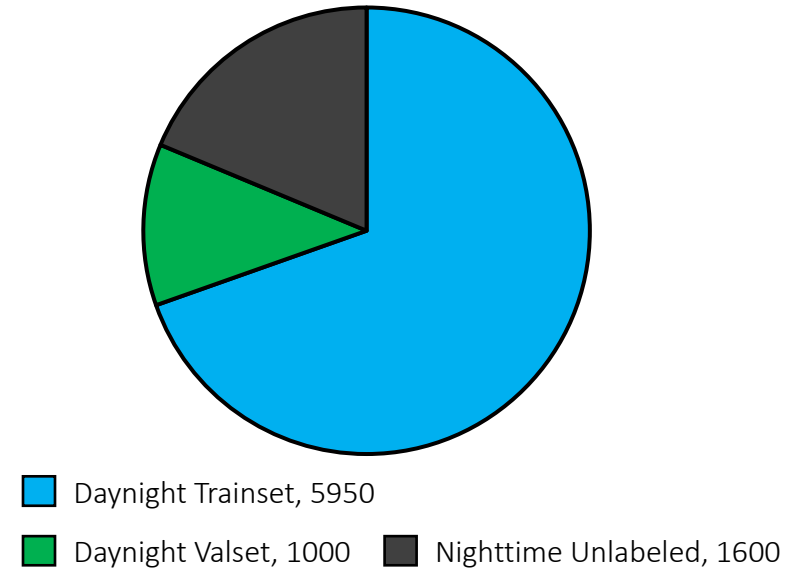

Experiment 8

- **Day-night** Cityscapes images
- Self-train with **1.600** nighttime images (based on **FID**)
- Image Translation with **perceptual loss**
- Segmentation with **Proposed Combined Loss (CL)**

➔ Our total configuration achieves the finest performance

Data Distribution

ID	Configuration	mIoU
3.1	FPN-res101-daynight-CE	33.9
5.2	FPN-res101- more night-from-ckpt-3.1	34.7 (+0.8)
8.1	FPN-res101-self-training-1k6-HIS-from-ckpt-5.2-CE	37.8 (+3.9)
8.2	FPN-res101-self-training-1k6-FID-from-ckpt-8.1-CE	39.5 (+5.6)
8.3	FPN-res101-self-training-1k6-FID-from-ckpt-8.1- CL	40.7 (+6.8)

Improvement Process

ID	Configuration	mIoU
1	Daytime Cityscapes dataset	27.5
2	Self-train with daytime data	29.0
3	Train and Self-train with day-night data	31.5
4	Add perceptual loss to translate images	33.9
5	Use histogram-based method to choose extra data	34.2
6	Refine day-night model with more nighttime images	34.7
7	Use FID to choose extra data and combined loss	39.3
8	Total FID, combined loss, self-training from morenight ckpt	40.7

Experiments Visualization

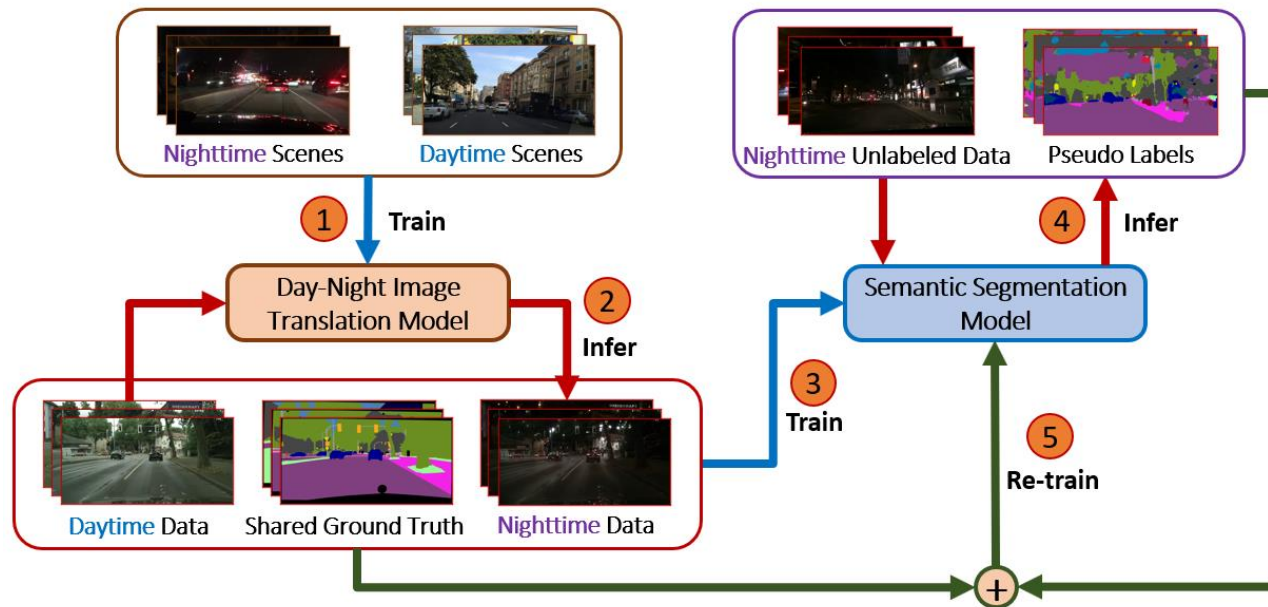

Void	Road	Sidewalk	Building	Wall	Fence	Pole	Traffic Light	Traffic Sign	Vegetation
Terrain	Sky	Person	Rider	Car	Truck	Bus	Train	Motorcycle	Bicycle

Summary – Our Contributions

1. Propose a framework for **semantic image segmentation in the dark** with **domain adaptation method**
2. Propose **a loss function** for semantic image segmentation
3. Build a **nighttime cityscapes dataset** with GAN
